3M Settles Minnesota Lawsuit for \$850 Million

By **Tiffany Kary**
February 20, 2018, 1:53 PM MST Updated on February 20, 2018, 5:02 PM MST

- ▶ 2010 suit alleged cancers, colitis linked to Scotchgard toxin
- ▶ Chemicals not a health risk at current exposures, 3M said

SHARE THIS ARTICLE

3M Co. has settled a lawsuit with Minnesota's Attorney General Lori Swanson for \$850 million, putting an end to eight years of litigation over a former Scotchgard ingredient that got into the state's drinking water.

The funds will be used to finance projects that involve drinking water and water sustainability, according to statements from 3M and the state, after Minnesota alleged that chemicals known as PFCs could cause harm to citizens.

The agreement materialized just as jury selection got underway Tuesday, and after Judge Kevin S. Burke urged the parties to compromise, saying that it wasn't in the best interests of the state's citizens or 3M's shareholders for the case to drag on.

Senators Announce Funding For Research, Remediation Of PFAS Chemicals

By LUCAS WILLARD · APR 11, 2018

Tweet Share Google+ Email

Listen 0:53

New York's U.S. Senators have announced federal funding to support research and remediation efforts for communities facing contamination from the chemicals PFOA and PFOS.

Democrats Charles Schumer and Kirsten Gillibrand said the recently passed omnibus spending bill includes \$63.8 million for the research and remediation of perfluorinated chemicals.

Environmental Health Perspectives • VOLUME 123 | NUMBER 5 | May 2015

The Madrid Statement on Poly- and Perfluoroalkyl Substances (PFASs)

<http://dx.doi.org/10.1289/ehp.1509934>

Outline

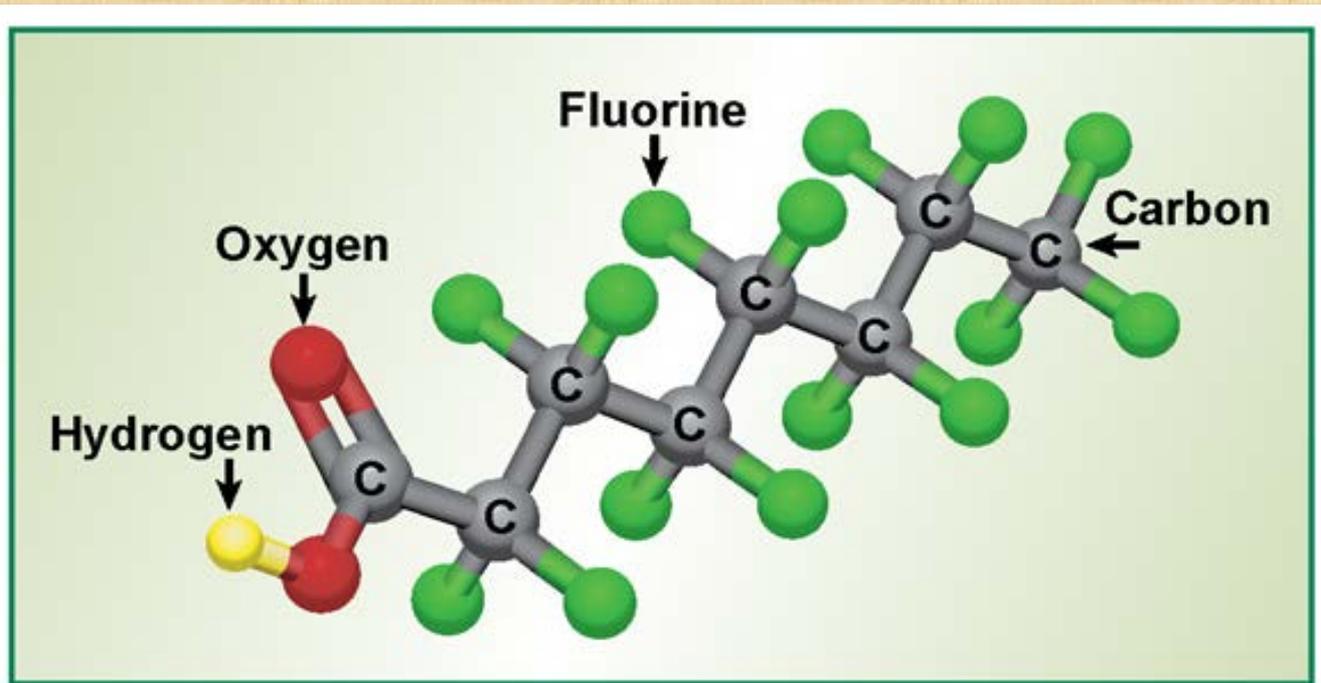

- What are PFAS
 - terminology
 - uses
 - sources & occurrence
 - exposure & health effects
 - regulations
- PFAS Properties
 - chemical structure
 - transport and fate in the environment
- Case Study

Terminology

- Originally referred to as PFCs --- Perfluorinated chemicals
 - Confusion with perfluorocarbons (refrigerants)
- EPA standardizing terminology
 - Per- and poly-fluorinated compounds (PFAS) or (PFASs)

PFAS Compounds

PFAS Molecule (example):

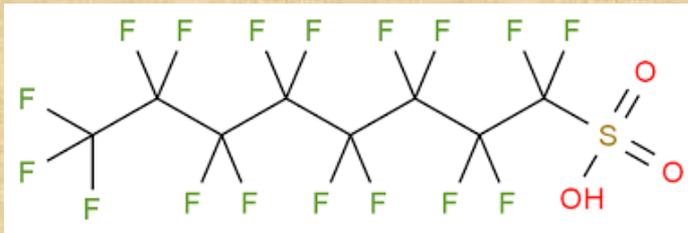

PFOA, also known as C8, has 8 carbons.

(image credit: NIEHS)

PFAS Compounds

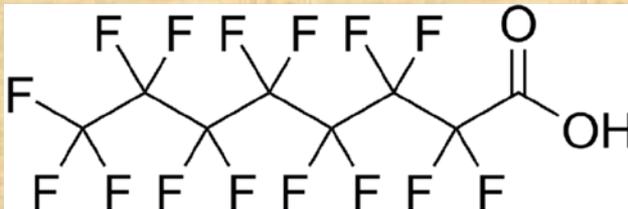

The two most widely investigated & regulated PFAS:

PFOS:

= perfluorooctanesulfonic acid

PFOA:

= perfluorooctanoic acid

PFAS Compounds

PFAS comprise a large family of compounds (example):

Compound	Formula
<i>Perfluorocarboxylic acids (PFCAs)</i>	
PFBA (perfluorobutanoic acid)	C ₄ H F ₇ O ₂
PFPeA (perfluoropentanoic acid)	C ₅ H F ₉ O ₂
PFHxA (perfluorohexanoic acid)	C ₆ H F ₁₁ O ₂
PFHpA (perfluoroheptanoic acid)	C ₇ H F ₁₃ O ₂
PFOA (perfluorooctanoic acid)	C ₈ H F ₁₅ O ₂
PFDA (perfluorodecanoic acid)	C ₁₀ H F ₁₉ O ₂
PFUnA (perfluoroundecanoic acid)	C ₁₁ H F ₂₁ O ₂
PFDoA(perfluorododecanoic acid)	C ₁₂ H F ₂₃ O ₂
PFTriA (perfluorotridecanoic acid)	C ₁₃ H F ₂₅ O ₂
<i>Perfluorosulfonic acids (PFSAs)</i>	
PFBS (perfluorobutanesulfonic acid)	C ₄ H F ₉ S O ₃
PFHxS (perfluorohexanesulfonic acid)	C ₆ H F ₁₁ S O ₃
<i>Fluorotelomer sulfonates (FTSs)</i>	
4:2 FTS	C ₆ H ₅ F ₉ S O ₃
6:2 FTS	C ₈ H ₅ F ₁₃ S O ₃
10:2 FTS	C ₁₀ H ₅ F ₁₇ S O ₃
<i>Polyfluoroalkyl phosphate diesters (diPAPs)</i>	
6:2-8:2-diPAP	C ₁₈ H ₉ F ₃₀ O ₄ P
8:2-8:2-diPAP	C ₂₀ H ₉ F ₃₄ O ₄ P
<i>Polyfluorinated ethers (PF ethers)</i>	
C ₅ polyfluoro ether	C ₅ H F ₉ O ₅
C ₆ polyfluoro ether	C ₆ H F ₁₁ O ₆

PFAS Compounds

Organisation for Economic Co-operation and Development

May 2018

TOWARD A NEW COMPREHENSIVE GLOBAL DATABASE OF PER- AND POLYFLUOROALKYL SUBSTANCES (PFASs):

SUMMARY REPORT ON UPDATING THE OECD 2007 LIST OF PER- AND POLYFLUOROALKYL SUBSTANCES (PFASs)

“In total, 4730 PFAS-related CAS numbers have been identified and manually categorised in this study”

CAS = Chemical Abstracts Service

Uses

The FluoroCouncil is a global organization representing the world's leading FluoroTechnology companies

<https://fluorocouncil.com/>

Uses

PFAS have been used for many purposes (examples):

- Consumer products
 - Nonstick materials--- Teflon
 - Stain-resistant textiles--- Scotchguard, Stainmaster
 - Water-resistant textiles--- Gore-Tex
 - Personal care products (cosmetics, shampoo)
 - Cleaning products
 - Paints
 - Food packaging (fast foods)
- Fire-fighting foams→ major issue at many military installations
- Engineered coatings
- Plastics

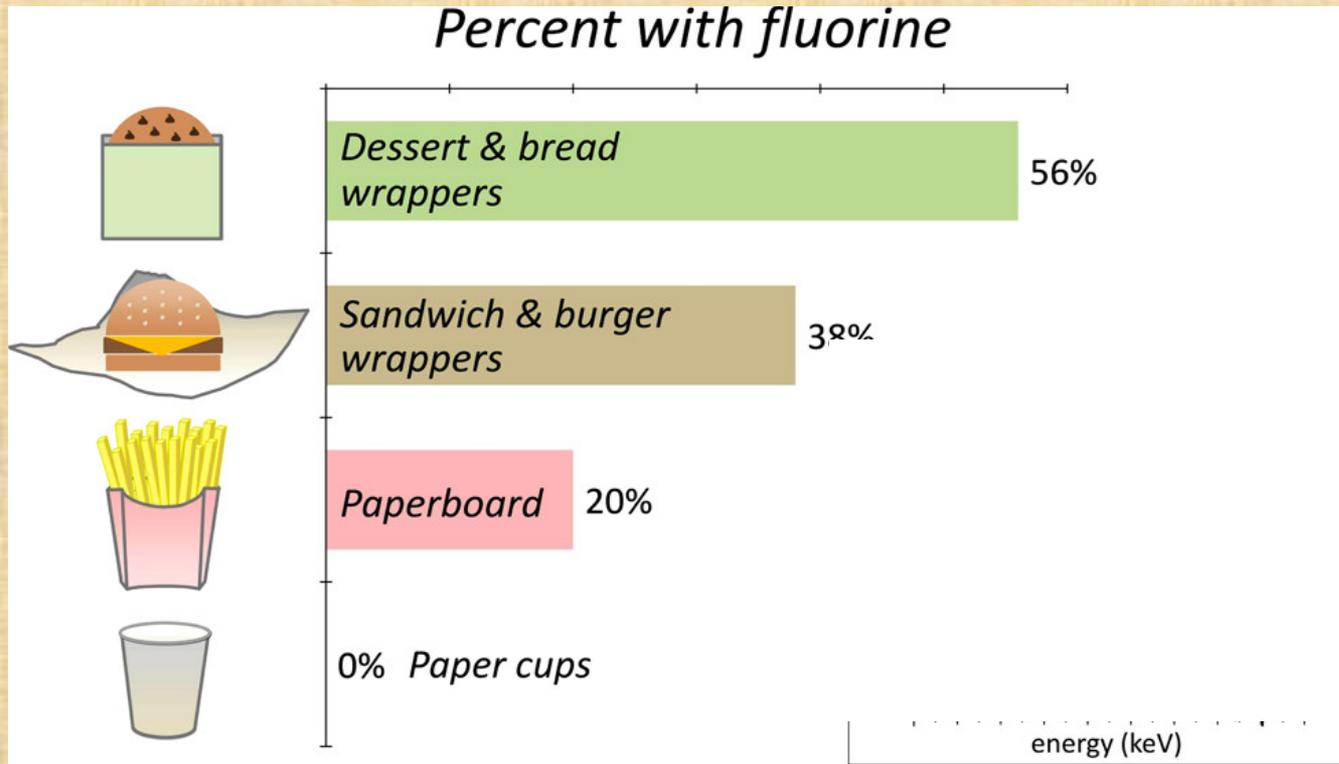

Uses- Coatings & Textiles

- Non-stick and stain-, grease-, and water-resistant properties

Uses- Food Packaging

Fluorinated Compounds in U.S. Fast Food Packaging

From: Schaider et al., 2017

Uses- Fire Fighting Foam

- AFFF- aqueous film forming foam
 - for Class B: flammable liquids (hydrocarbons)
- Airports
- Military Bases

Sources to the Environment

- Manufacturing facilities

>>> Output to:

- atmosphere
- surface water
- soil
- groundwater

PFOA & PFOS in Tucson GW

<https://www.tucsonaz.gov/water/pfas>

PFAS in US Drinking Water

Recent survey was conducted to determine the occurrence of select PFAS in drinking water for all 4064 public water supplies that serve >10,000 individuals in the US.

Drinking water supplies for 6 million U.S. residents exceed US EPA's lifetime health advisory for PFOS/PFOA

From: Hu et al., 2016.

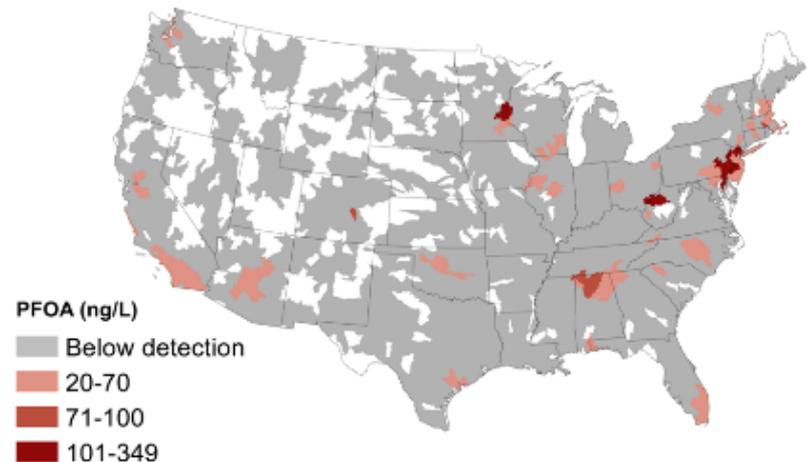

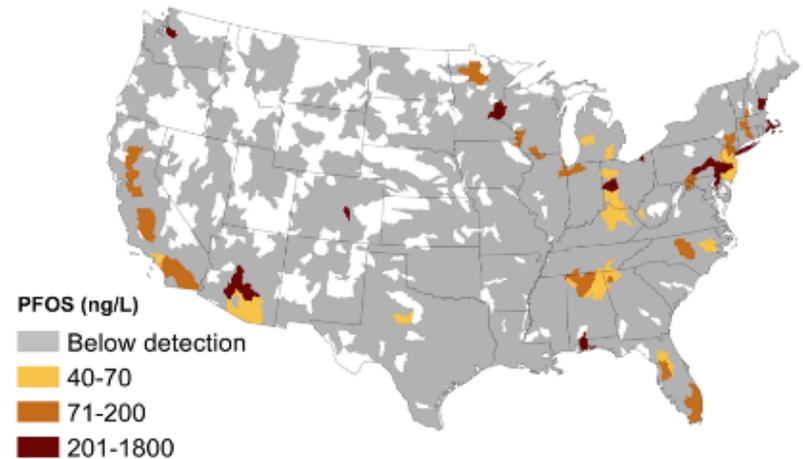

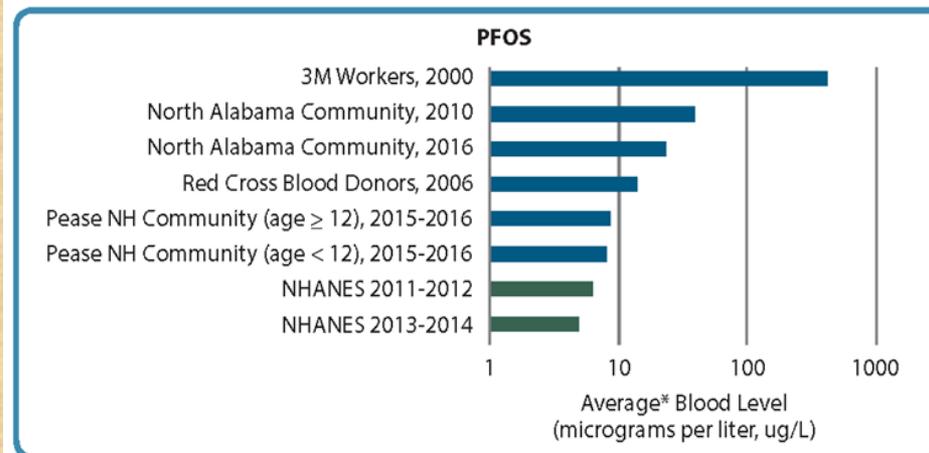

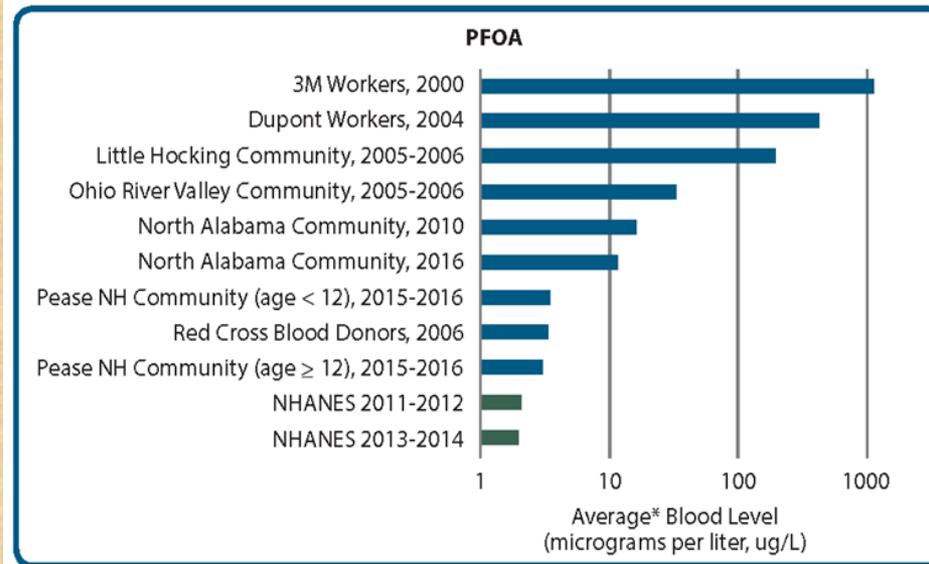

Figure 1. Hydrologic unit codes (eight-digit HUCs) used as a proxy for watersheds with detectable PFOA and PFOS in drinking water measured in the US EPA's UCMR3 program (2013–2015). Blank areas represent regions where no data are available.

*Used EPA data

Human Exposure

- CDC National Health and Nutrition Examination Survey
 - PFAS detection in blood of humans
 - Most people (97%) in the US have one or more PFAS in their blood

Blood Levels in People Who Were Exposed to PFAS

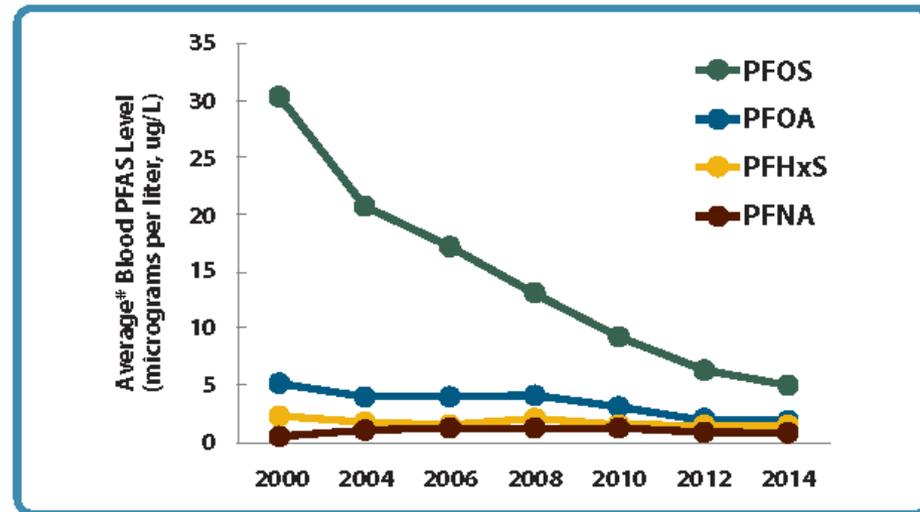

* Average = geometric mean

Human Exposure

- CDC National Health and Nutrition Examination Survey
 - from 2000 to 2014, PFOS & PFOA blood levels have declined

Blood Levels of the Most Common PFAS in People in the United States from 2000-2014

* Average = geometric mean

Data Source: Centers for Disease Control and Prevention. Fourth Report on Human Exposure to Environmental Chemicals, Updated Tables, (January 2017). Atlanta, GA: U.S. Department of Health and Human Services, Centers for Disease Control and Prevention.

From: ATSDR, 2017

Health Effects

- **From ATSDR website:**

Some, but not all studies in humans have shown that certain PFAS may:

- affect growth, learning, and behavior of infants and children
- lower a woman's chance of getting pregnant
- interfere with the body's natural hormones
- increase cholesterol levels
- affect the immune system
- increase the risk of cancer

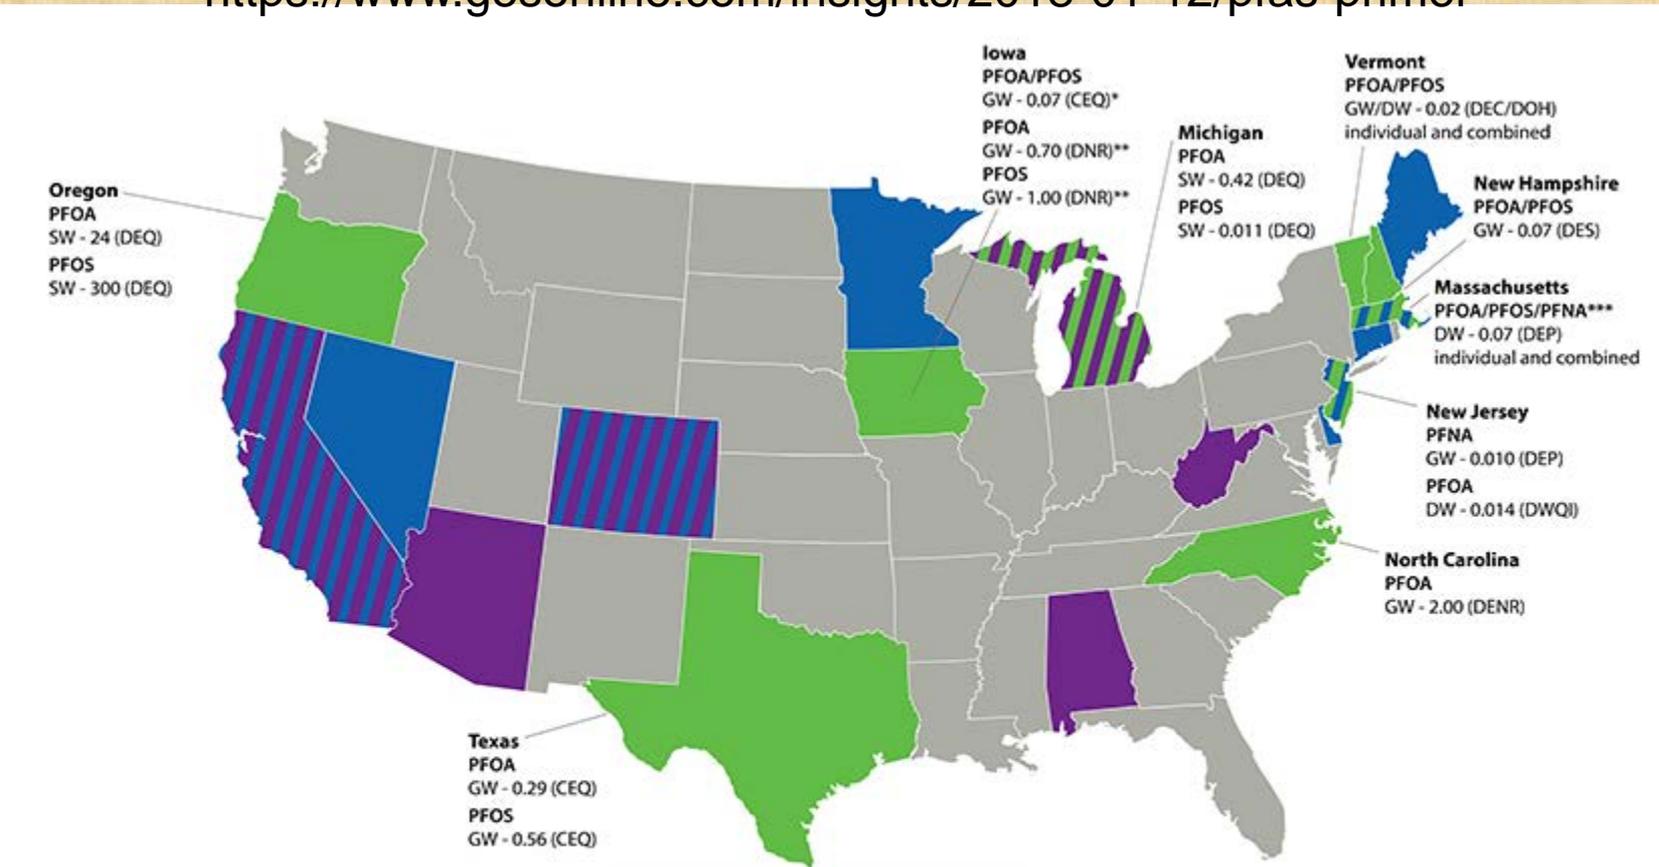

- EPA— ongoing toxicological research

Regulations

- PFAS not regulated under the Safe Drinking Water Act
 - No national primary drinking water regulations (MCLs)
- PFOS & PFOA listed in the EPA **Contaminant Candidate List 3** - 2009
- EPA issued lifetime health advisories (LHAs) for long-term exposures to PFOA and PFOS through drinking water (2016)
 - **70 ng/L (combined) → parts per trillion**

State-level Regulatory Activity

Regulations

EPA 823R18004 | February 2019 | www.epa.gov/pfas

EPA's Per- and Polyfluoroalkyl Substances (PFAS) Action Plan

Plan Includes:

- Evaluate the need for a maximum contaminant level (MCL) for PFOA and PFOS
- Beginning the necessary steps to propose designating PFOA and PFOS as “hazardous substances”
- Developing groundwater cleanup recommendations for PFOA and PFOS at contaminated sites

<https://www.epa.gov/pfas/epas-pfas-action-plan>

Regulations

- May 2000: Following negotiations between EPA and 3M, the company announced that it would voluntarily phase out PFOS
- 2006: EPA established a voluntary stewardship program with 8 chemical manufacturers to phase out production of PFOA by 2015
- Toxic Substances Control Act (TSCA): EPA issues Significant New Use Rules (SNURs) for chemical manufacturing
 - Since 2002, issued a series of SNURs affecting dozens of PFAS chemicals
- Stockholm Convention--- **Persistent Organic Pollutants (POPs)**
 - PFOS is listed
 - PFOA under consideration

Phase-out & Replacement

- Initial PFAS used in products are starting to be phased out and replaced

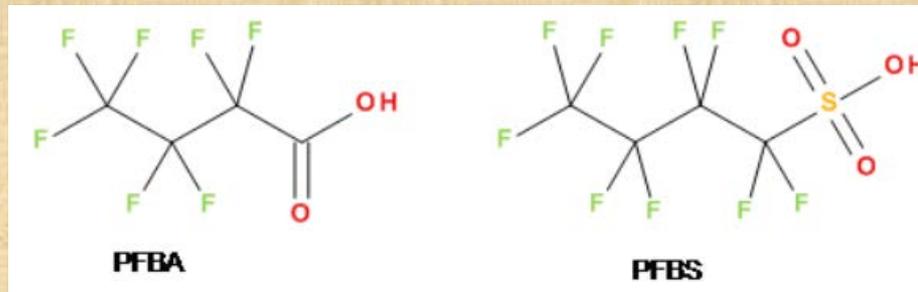

DOD Denix- 2011:
PFOS use in AFFF phased out after 2000

Gorefabrics.com- Jan 2014:
**GORE completes elimination of PFOA
from raw material of its functional fabrics**

CNBC- Dec 2018:
**Whole Foods removes packaging with a
cancer-linked chemical from its stores**

Short-Chain PFAS Alternatives

- Less potential for bioaccumulation
- Higher mobility
- Less research available about the environmental and human health impacts

Perfluorobutanoic acid

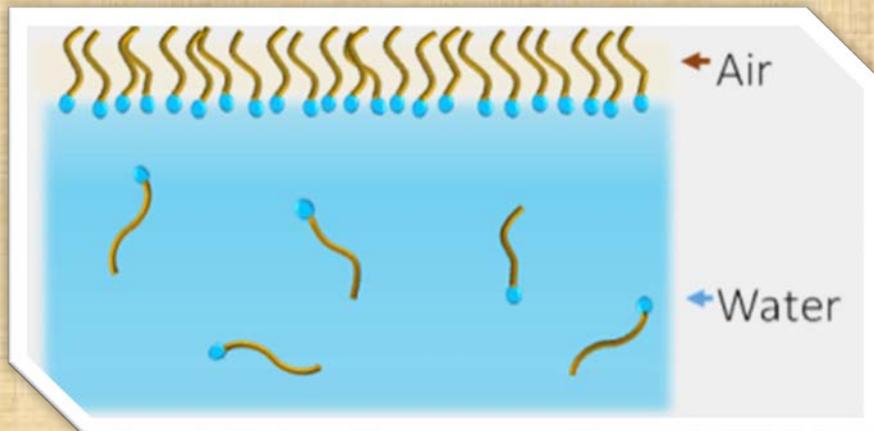

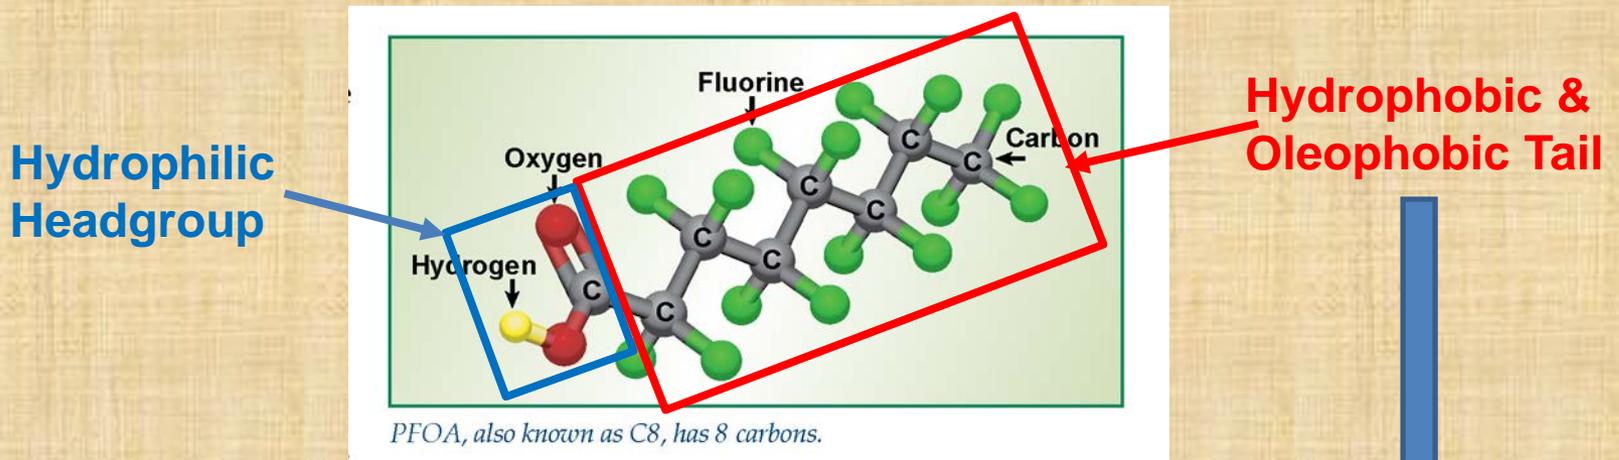

Perfluorobutane sulfonic acid

A screenshot of the Environmental Health Perspectives (EHP) journal website. The header features the EHP logo and the text "ENVIRONMENTAL HEALTH PERSPECTIVES". Below the header is a navigation bar with links for "Current Issue", "Articles", "Collections", "Authors", "EHP 中文版", "Career Opportunities", and "E-Mail". The main content area shows "EDITORIAL" on the left and "VOLUME 123 | 2015" on the right. Social media icons for email, Facebook, Twitter, LinkedIn, Google+, and YouTube are displayed. The article title is "Alternatives to PFASs: Perspectives on the Science" by Linda S. Birnbaum¹ and Philippe Grandjean^{2,3}. The DOI is 10.1289/ehp.1509944.

Physicochemical Properties

PFAS have a unique set of properties:

- Many PFAS are surfactants

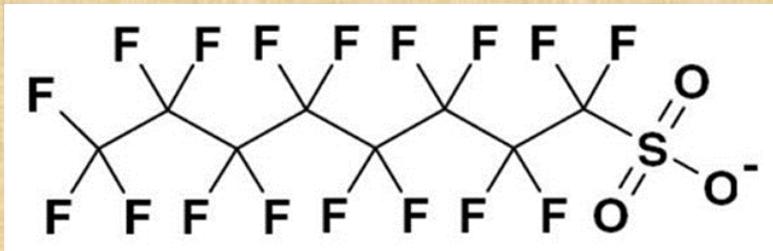

*Provides water and oil repellency

Physicochemical Properties

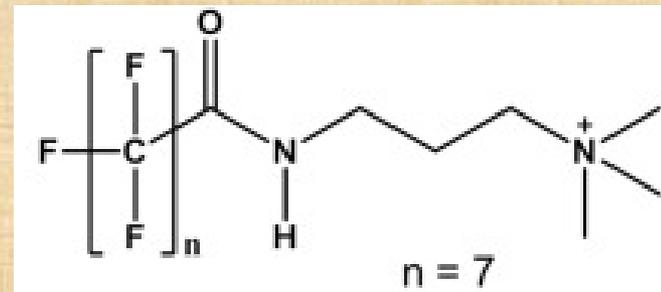

PFAS have a unique set of properties:

- Several different classes of compounds--- different surfactant headgroups

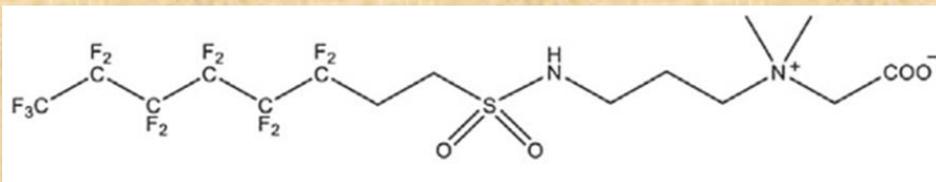

Anionic

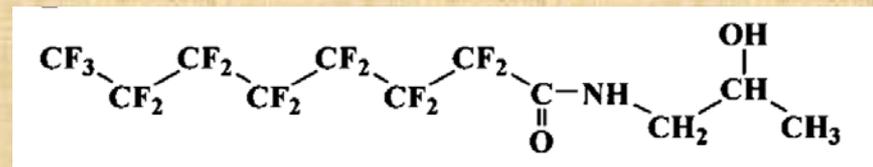

Cationic

Zwitterionic

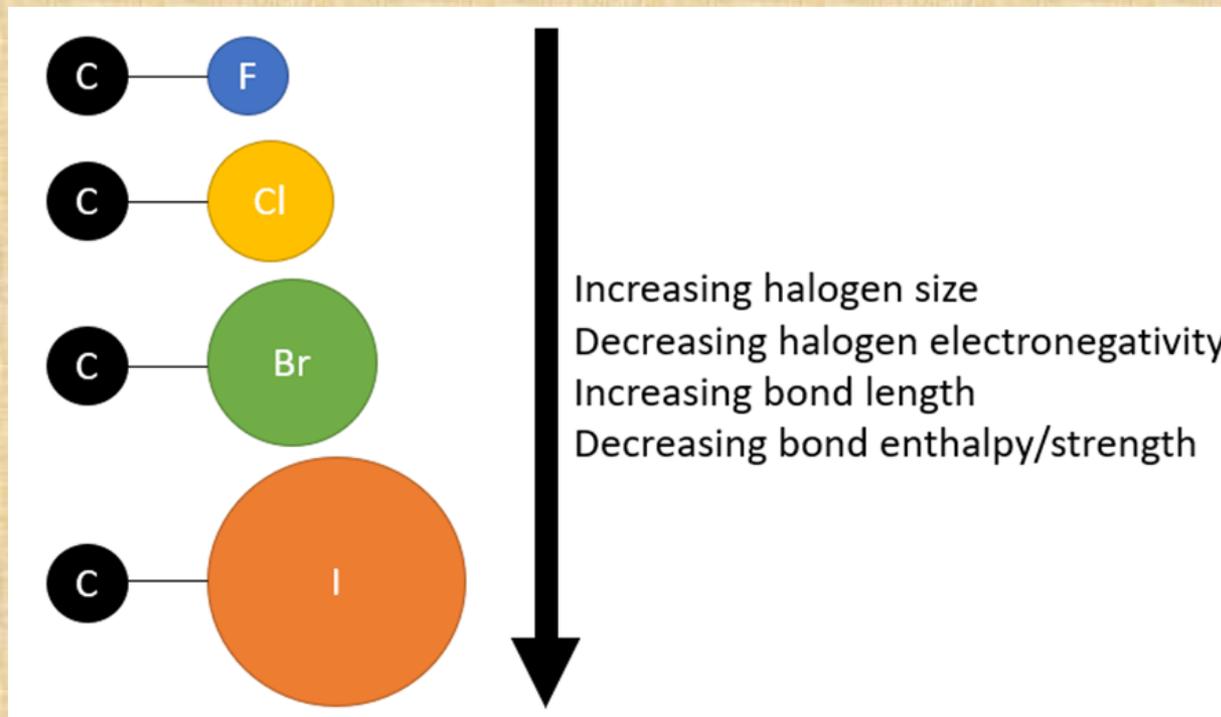

Nonionic

Physicochemical Properties

PFAS have a unique set of properties:

- Possess extremely strong carbon-fluorine bonds
 - very resistant to transformation reactions → **persistent**

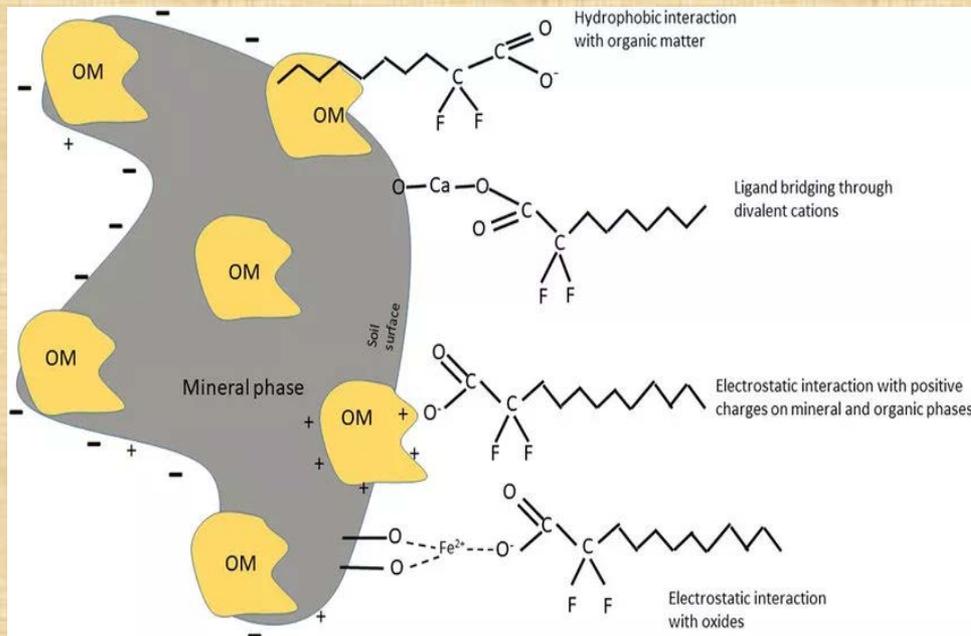

Transport & Fate

- Transport and fate behavior is a function of molecular structure
- General behavior
 - Low volatilities
 - Relatively high aqueous solubilities
 - Low transformation potential (except for “precursors”)
 - Often present as mixtures
 - Retention processes
 - Sorption by solid phases (soil, sediment, aquifer material) has been a major focus of study for past decade

Transport & Fate

- Sorption of PFAS by soil, sediment, and aquifer material (geomeia) is complex
- Function of PFAS molecular structure and the geochemical properties of the geomeia

Geomeia are heterogeneous

From: Li et al., 2018

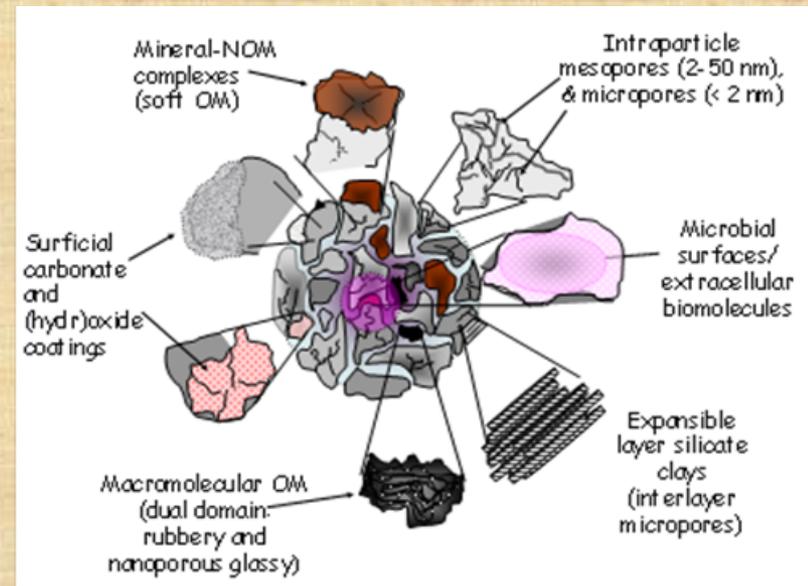

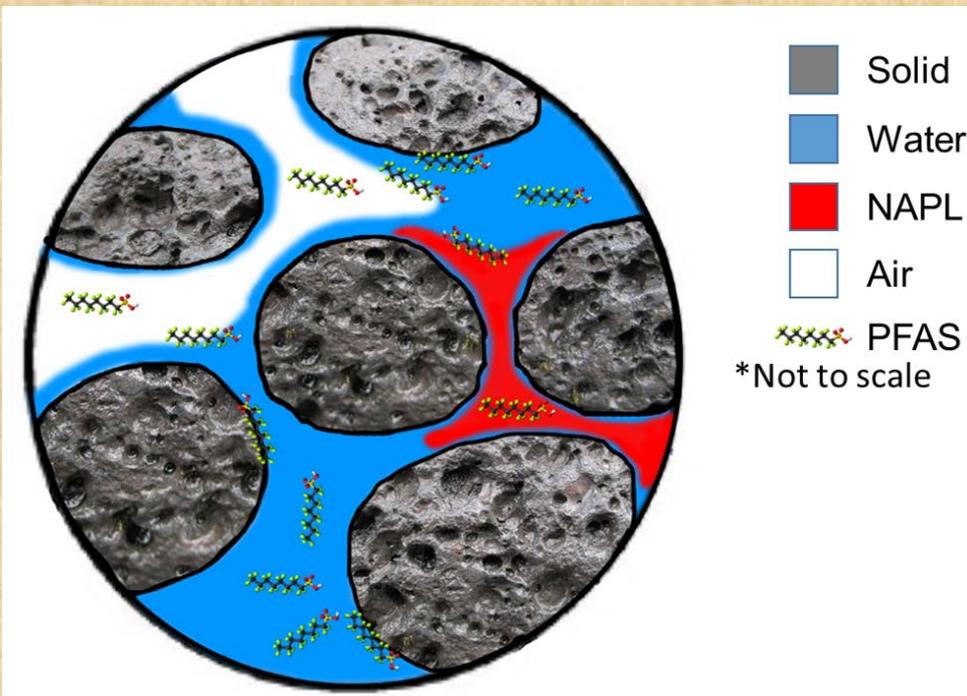

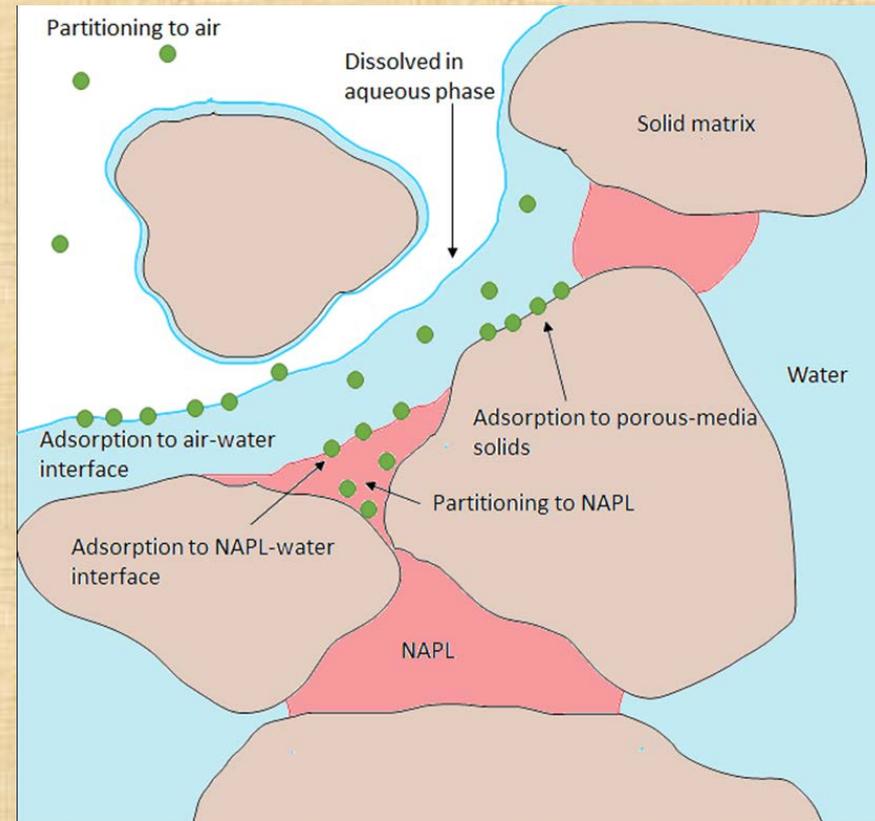

Figure A. Biogeochemically-reactive solid-water interfaces present in natural and waste-impacted geomeia (from Chorover and Brusseau, 2008)

Transport & Fate

- Transport and fate of PFAS in source zones even more complex: Additional retention processes:

From: Brusseau, 2018

Prepared by S. Van Glubt

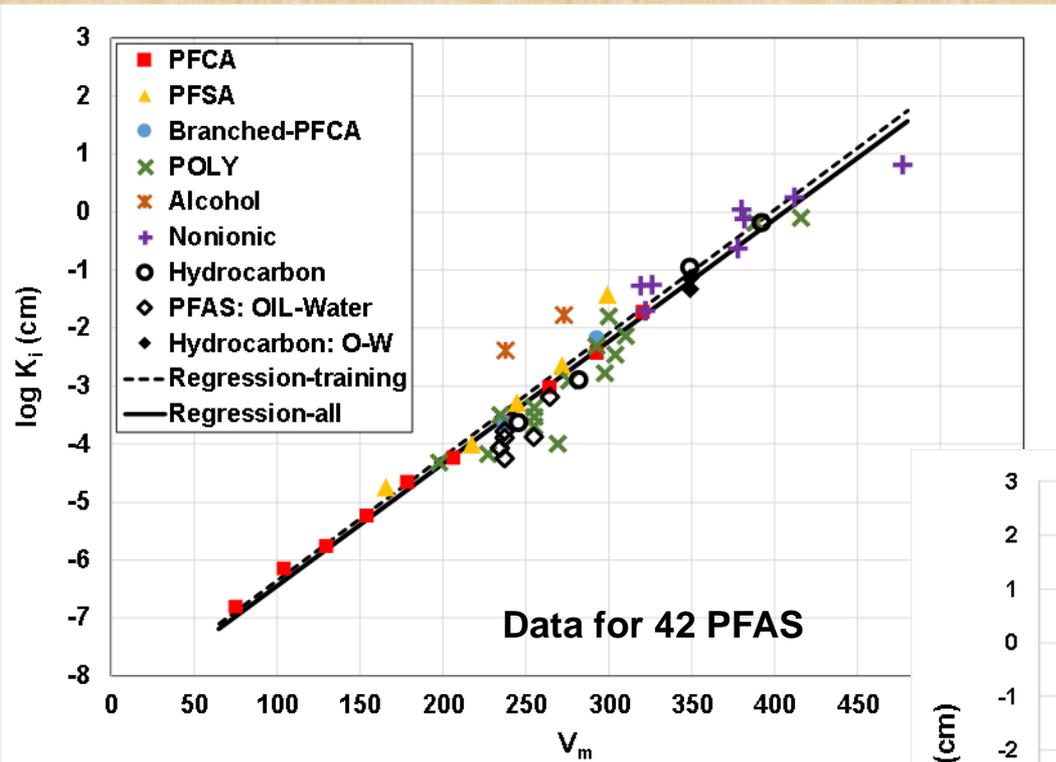

Transport & Fate

- Transport and fate of PFAS in source zones even more complex: Additional retention processes:
 - Adsorption at the air-water interface in vadose zone
 - Adsorption at the NAPL-water interface in NAPL source zones
 - NAPL = nonaqueous-phase liquid → chlorinated solvents, fuels

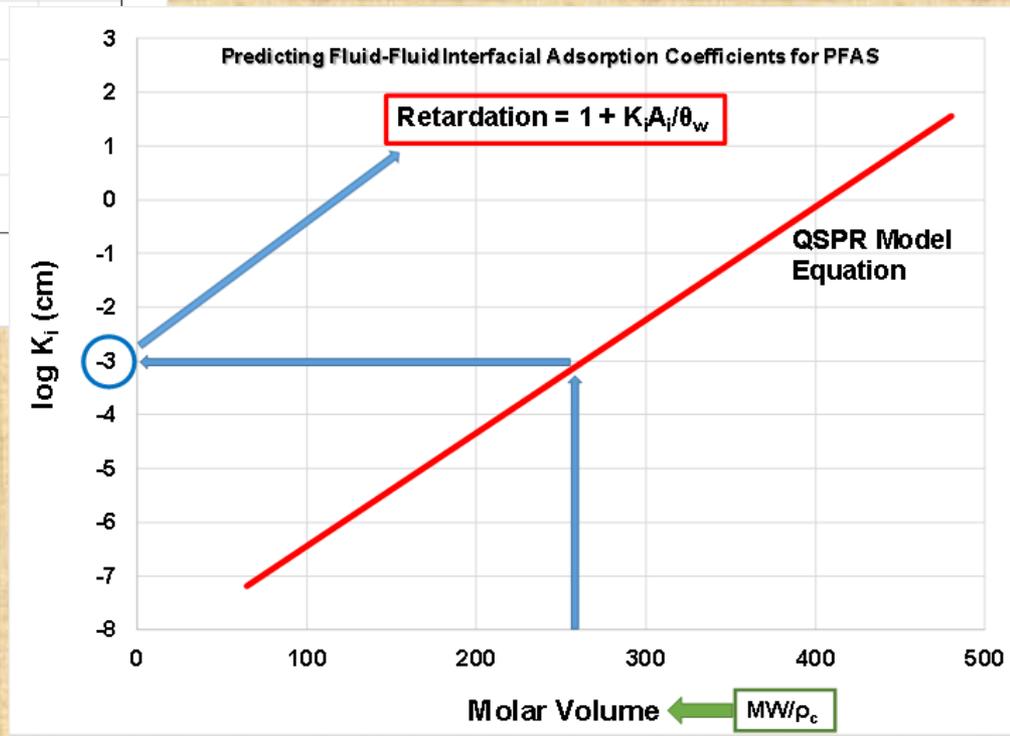

Comprehensive Retention Model for PFAS				
<i>Phase</i>	<i>Source Zone^a</i>	<i>Plume^b</i>		
Aqueous ^c	Blue	Blue	Blue	Relevant for vast majority of PFAS at essentially all sites
Sorbed by solid phase	Blue	Blue	Green	Relevant for many critical PFAS of concern at many sites
Vapor	Yellow	Yellow	Yellow	Relevant for select PFAS at some sites
Adsorbed at air-water interface	Green	Green	Grey	Not relevant
Adsorbed at air-NAPL interface	Yellow	Grey	Grey	
Adsorbed at NAPL-water interface	Green	Grey	Grey	
Absorbed by NAPL	Green	Grey	Grey	

From: Brusseau et al., 2019

Transport & Fate

From: Brusseau, 2019

Case Study

Redevelopment of Pease AFB, NH

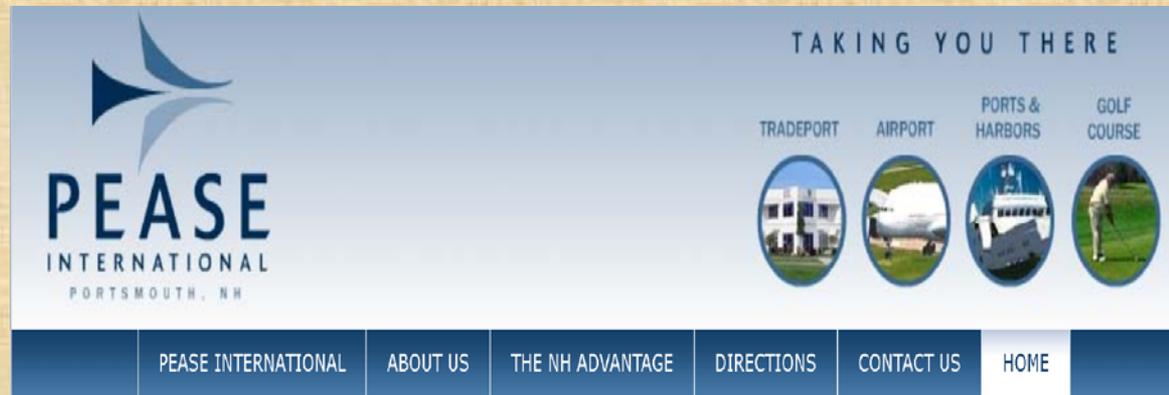

- 1989- Closure decision finalized
 - officially closed in 1991
 - Listed on the NPL in 1990
 - 41 hazardous waste sites (chlorinated solvents)
 - 63 petroleum release sites
 - Multiple remedial actions implemented
 - The original remediation effort did not include PFAS
- >>>PFAS-based foam used at fire-training areas on base

Case Study

Redevelopment of Pease AFB, NH

- Early 1990's- AFB redeveloped into a tradeport
 - 250+ businesses
 - 2 daycare facilities
 - Hotels, restaurants
 - Healthcare facilities
 - ~8000 workers

A WORLD CLASS BUSINESS & AVIATION INDUSTRIAL PARK

Pease International is a prospering business and aviation industrial community covering 3,000 acres of world-class office and industrial space. It is home to over 250 companies employing more than 9,525 people occupying some 4 million square feet of office and industrial space.

The community comprises the Pease International Tradeport, the Portsmouth International Airport (PSM), Skyhaven Airport (DAW), the Division of Ports and Harbors, and the 27-hole Pease Golf Course.

Offering a Foreign Trade Zone with access to the east international trade corridors by land, direct air cargo or by sea via the Port of New Hampshire, Pease is ideally suited for any import or export business.

We are conveniently located adjacent to Interstate 95 just 50 miles from Boston, MA, Manchester,

NH, and Portland, ME.

Case Study

Redevelopment of Pease AFB, NH

- Three wells on the former AFB used to supply potable water to the Tradeport facility
- 2013- sampling of site groundwater revealed presence of PFAS
 - 2014 sampling of water supply wells
 - 2015 EPA issues Admin Order to Air Force to investigate & remediate
 - Air Force has spent ~\$55M to date (<http://nhpr.org/post/air-force-give-update-cleanup-efforts-pease>)
- Concern over long-term exposure of workers, children, and prior AFB personnel

Case Study

Redevelopment of Pease AFB, NH

- 2014 groundwater data

From: City of Portsmouth, 2014

Notes:

Grey text indicates the parameter was not detected.

indicates concentration above PHA

J - estimated value

all results in µg/L

ND - non detect

PHA - Provisional Health Advisory

-- indicates no established PHA

Final LHA = 0.07 ug/L

Summary

- PFAS have many uses and sources
- Widespread in the environment
- Significant analytical constraints
- Persistent in the environment
- Complex transport behavior
- Difficult to treat

Difficult & costly to assess and mitigate risk
